

# Simultaneous Policy based on New Evolutionary Biology based on Unified Physics

(by Peter Jakubowski, on 4th January 2018)

From the socio-political point of view, our world is in a mess. This claim John Bunzl and Nick Duffell, the authors of the recent book: "The Simpol Solution; Solving Global Problems Could Be Easier Than We Think"[1]. They conclude with the following:

Simpol [Simultaneous Policy] may not have all the answers. Simpol is not designed to address every problem but is tailored towards solving global problems. This means that all the various solutions presently being pursued by NGOs, governments and others still remain important at regional, national and local levels. For the global level, Simpol seems to answer more key questions and meets more key criteria than any other proposal we have seen so far.

From the philosophical point of view of an evolutionary biologist, Andreas Weber, we should become aware that "[a] fundamental shift is waiting for us". In his recent book: "The Biology of Wonder; Aliveness, Feeling, and the Metamorphosis of Science" [2], Weber delivers his biological background for Bunzl and Duffell' Simpol. He describes our present situation not as a mess of the world but as an evolutionary step of our life on Earth. He writes in his introduction:

An individual point of view and feelings are not marginal, transient epiphenomenon but rather the opposite: the foundation from which an explanation of life has to start. The new biology places value and feeling at the center of physics of living organisms - not as one of many interpretive approaches, but as an indispensable element of a scientific description of life. ... Today, researchers are discovering that feeling - the experience of a subjective standpoint - and the desire to exist are phenomena that lie at the heart of a modern concept of biology. This message is so radical that, so far, it is not readily understood.

From a strictly physical point of view, the socio-political shift of John Bunzl and Nick Duffell and the biological shift of Andreas Weber are not waiting for us but are already here in our midst – since ~1800, with a necessary evolutionary shift toward our first truly global civilisation on Earth. In my recent book: "Unified Physics; Which Einstein & co. Dreamed of And is Finally Realised Now" [3], I [Peter Jakubowski] write at the end of my book:

This picture [by Arnold J. Toynbee] of a decay of civilisations as social units is highly compatible with my physical picture of a decay of civilisations seen as the genealogical units. From my picture we can see now that our own Genus has not yet had enough time to develop any second new Species. This is the reason, why we all, inhabiting the whole Earth today, belong to a single Species. We have gone till now only half of our way to a new Species. The last "splitting" of level 5 (and 4) defines the beginning of the series of six "great" civilisations preceding our present one, the *First Global* civilisation on Earth. The most characteristic examples of those civilisations were: Atlantis Survivors, Old Egypt, New Egypt, Greek, Roman, and the Medieval civilisations. The exact theoretical lifespan of those civilisations (of 1118,22 years) are precisely documented historically and thus is serving as an additional observational proof of the reality of the Cosmic Timescale of our Cosmic Hierarchy, and consequently, of the Cosmic Hierarchy itself. ...

Do we really realise, where are we "sitting" today on our genealogical tree? We have just reached the half of the step to the first splitting of our Genus allowing a new Species of the Genus to appear in 6842 years [as of 2017]. Eleven such splittings will follow during the present period of the level 5. Therefore we have to understand and to accept that our collectively traumatized Species was not continuously growing intellectually and bodily all the time since its origin 6736 years ago. Quite on the contrary, our development was highly destructive rather than constructive during this time. We were steadily loosing, forgetting, and damaging more of the advanced knowledge and culture of the ancient civilisations than gaining a new knowledge and ideas. The fantastic techniques to build pyramids, sphinx, or megalithic objects, the knowledge to organize large human communities and cities, the understanding of our role in the cosmic environment, the ability to communicate across the oceans, the healing techniques of the Australian aboriginal people, and probably much more above that, has been erased from our global memory.

Only now, in our *First Global* civilisation, with its unique technical possibility to build a global network of hearts and minds, we have also a new possibility to "read out" the Universal Quantum Field, the *Akasha* Field, searching for the lost information. It seems that we have now a real chance to change the negative direction of the human development to the positive once again. The primary condition for this change is the obligatory paradigm change, not only in the natural sciences and in humanities, but also in our consciousness. It is exactly what our visionary leadership, like the Club of Budapest, is trying to reach today. We have to support them with all our knowledge and intuition. ...

We have to wake up, to stop our negative evolution in all parts of our World, and to grow again, physically and mentally. There are many fantastic tasks waiting for us in the near future.

How the Unified Physics, beginning with the Universal Creative Potential and the Quantum Spectrum of all possible Matter-Spirit quanta, is actually reaching at the above quoted conclusions, will be (hopefully soon) discussed between the contributing authors and all interested supporters of the Simultaneous Policy.
