The bestselling author of *Science and Akashic Field* now presents the definitive theory of the Akasha Paradigm - a bold new perspective, emerging from findings at the cutting edge of physics. Rather than view the things we experience as real and the space that embeds them as empty and passive, in the Akasha concept it is the space that is real, while the things embedded in that space are secondary. Essentially, a unity paradigm, Akasha embraces, and then transcends, the old paradigms of religion as

well as the paradigms of modern science providing insights into values like harmony and truth, and life-sustaining implications for humankind.

THE AKASHA PARADIGM IN SCIENCE includes contributions from Peter Jakubowski, László Gazdag, Paul A. LaViolette, David W. Thomson III and James D. Bourassa.

Part IV “The Akashic Revolution in Physics Groundbreaking Hypotheses”
