

Peter Jakubowski

Man in a new light

*Today we stand on the edge of the evolutionary abyss.
Do we close our eyes and take the next step forward,
or will we open them wide
and see our lives in a new light?*

About the book

This book answers two questions. Firstly: How did our ancestors manage to survive thousands of cosmic, climatic, and environmental catastrophes, and achieve dominion over all other Species of living beings? And secondly: Why are we ourselves destroying our prospects for a bright future for our and subsequent Species of Humans?

Although the quantisation of energy was already postulated a century ago, the possibility that not only the world of atoms, but also of stars and galaxies could be quantised, was only recognised by the author in the 1980s and was investigated over the next few decades. The most important result of this research was the observation that we live in a vast Cosmic Hierarchy of the Solar System. Its Cosmic Clock set the bar for our incredibly fortunate development from Bacteria to Man. All quantum leaps in the Cosmic Hierarchy from level 4 upwards, must be regarded as a catastrophe for most living organisms. With the exception of a few lucky ones, who find a protective niche for themselves during such a catastrophe (and after it) and can form a mentally more evolved evolutionary group there. One such lucky group has even won the game several times in a row. It is us.

About the author

Peter Jakubowski is a physicist and universal philosopher, who has extended his Unified Physics to a Unified Description of the entire Universe, including life and human consciousness. The Formula of the Universe he discovered will fundamentally change all natural sciences and the technologies based on them.

Contents

Introductory remarks	9
Part I. Unified Science	11
Chapter 1. Unified Science is based on three pillars of the Universal Philosophy	11
1a. The Unified Family of All Physical Quantities	12
1b. The Quantum Spectrum of Matter-Spirit quanta	28
1c. The Cosmic Hierarchy of our Solar System	44
1d. The origin and the present of the Solar System	52
Part II: The most important proofs of the correctness of the idea of Universal Philosophy	63
Chapter 2. The Unified Spectrum of the Electromagnetic Radiation	63
2a. The atmospheric shield of life	64
2b. Hydrogen-defined temperature of the surface of the Sun	70
Chapter 3. The Universal Cosmic Time Scale of the Cosmic Hierarchy	75
3a. The complete scale of bioresonances	76
3b. The geological periods of the Earth's history	79
3c. The largest glaciations on the Earth's surface	83

Chapter 4. Geophysical observations	87
4a. The vibrating Earth	88
4b. The Earth's rosette-shaped orbit in the Solar System	96
4c. The permanent shortening of the tropical year	100
4d. The snowball Earth and the explosion of life	102
4e. The Greenland ice core evidence of the cosmic energy transfer to Earth	103
4f. The antipodal correlation on the Moon	108
Part III: The origin of modern Man	115
Chapter 5. The individual hours of the Cosmic Clock	115
5a. Examples of the course of the last hours of the Cosmic Clock	116
Chapter 6. The origin of the Family <i>Homo sapiens</i>	123
6a. The origin of the Genus <i>Homo sapiens Neanderthalensis</i>	124
6b. The last two Species of <i>Neanderthals</i> and us	126
Chapter 7. The greatest catastrophe in human history	129
7a. The traumatising catastrophe of level 5 of the Cosmic Hierarchy	130
7b. The incredibly fortunate birth of our Species <i>Homo sapiens Sapiens</i>	132
7c. The exemplary Civilisations of the Mediterranean region	134

Part IV: Our <i>First Global Civilisation</i>	137
Chapter 8. Our chance to overcome the trauma	137
8a. The barely perceptible border between Civilisations	138
8b. The necessary transition from World domination to World administration	142
8c. The necessary return to the family-based structure of our World Community	144
8d. Family-based participatory democracy - the guarantor of our survival in the current millennium	147
Short Review	151
1) The new perspective	151
2) The human being in this new light	159
Appendix	168
Quotations from the book by Lynn Margulis and Dorian Sagan: "What is life?"	168
